

# Technology Enablement Services

Connecting providers to health and wellness information

Versatile's Technology Enablement Services connects secure networks, devices, EHR, IoT, and patients. We blend traditional IT with cloud technologies to provide healthcare organizations with a set of solutions to plan, design, implement, and maintain complex health information technology (HIT) infrastructures.

We translate business requirements into detailed system designs and integration plans for complex HIT infrastructures that extend all the way to the ambulatory practice and provider.

Electronic Health Records (EHR) and the systems that capture medical data are the driving force behind healthcare reform. This data, captured at the point of care, is key for measurements that enable Accountable Care Organizations and coordinated patient care.

Organizations must provide an EHR platform paired with an application exchange that contains several additional components such as patient engagement applications, telemedicine, and care management. These systems require a sophisticated infrastructure that ensures availability, meets performance and access requirements for a diverse healthcare organization, and maintains the confidentiality and integrity of all its associated data.

A healthcare organization's connectivity to care information must meet business requirements and be seamlessly integrated into existing systems and processes. And they have to bring their programs online the right way, at an affordable cost, and at minimal risk.

| <b>SOLUTION DESIGN</b>   | <b>ENABLEMENT SERVICES</b>  | <b>POST-IMPLEMENTATION SERVICES</b>   |
| Strategy   | Enterprise and community EHR and Technology Implementation                        | Systems performance and security testing  |
| Enterprise and Cloud   | Administrative, technical, physical controls and training                         | Infrastructure tuning and optimization  |
| Procedures and standards development, documentation and training for systems and security policies | Staff augmentation services   | System upgrades   |
| EHR Hosting  | Mobility  |   |

### The Versatile Difference

Talented and experienced Versatile healthcare IT leaders employ proven tools, techniques, and cost management methods on every engagement.

Our model ensures your successful connectivity to patient information and technology support with careful consideration of all stakeholders and their clinical and business requirements. Seamless and continuous improvement reaches each physician practice assuring you will achieve your goals for performance, availability, security, and scalability in every element of your solution architecture.

### Deep Experience, Proven Results

Versatile has successfully connected providers and stakeholders for a variety of healthcare organizations including integrated delivery networks, hospitals, payers, physician organizations, and physician practices. Our Versatile solutions enable healthcare organizations to achieve the benefits of integrated technology.

We understand the unique challenges associated with planning, executing, and controlling healthcare IT initiatives. 🚀

---

Versatile Health enables Healthcare organizations to become more effective, efficient and productive while reducing the burden of technology on clinicians. Our unique ambulatory methodology combines an ideal balance of tools, talents, techniques, and cost management, within a scalable enterprise approach, not duplicable by larger national service firms. Healthcare IT leaders who are responsible for creating and maintaining a dynamic HIT infrastructure have a reliable partner in Versatile. Hundreds of healthcare organizations rely on our advanced techniques and experienced staff to provide reliable and optimized services for the entire HIT lifecycle to ensure that they have well-designed, efficiently operated technical environments.
